## RevenueRadar Now Launched...

### Free Your Revenue

RevenueRadar is a software revolution manifested from the brilliant minds of millennial engineers.

Revenue hides in the shadows of the dealer database.

RevenueRadar shines the light, sparing no kilowatt.

# Advanced Database Mining

RevenueRadar is an advanced dealership database-mining tool using DealerSocket's technology.

There are eleven queries—called Radars—that continuously search your database and —Ping— you when customers are in unique positions to spend, driving revenue to your Sales and Service departments.

RevenueRadar works with every major DMS and seamlessly integrates with DealerSocket CRM, allowing Pings to appear throughout your CRM. The CRM integration provides accountability, as well as the opportunity to maximize every Ping.
